SOLO CHALLENGE (But you can get the help of those around you!)

Delta!

This week is all about getting you ready to work on your personal website, which we will be starting next week! We're going to set the foundation up this week so that we can hit the ground running next week.

So, it's time to start building the framework for your personal site! Your personal site will end up being "whatever you want". More importantly, it's a place for you to lovingly show your knowledge that you've gained from all of that hard work. Don't worry, we are not looking for completion, but rather the start of something great.

For example:

- A personal blog about coding, cooking, cats, tacos, something.
- An "app" that you've been thinking about making. Past examples include: a choose your own adventure game, a parking spot reminder, and a Wedding DJ song request site.
- A personal branding site.
- A shopping site for something you make.
- A photography/art site

If you can't think of anything you're really hooked on yet, that's OK. You're going to have the entire week to start thinking about it. But try to land on something by midweek. For now, this is just going to be a framework for what you're going to make.

Get all of the aspects of the MEAN stack working, pick a front end framework (Bootstrap is recommended) and start laying the groundwork:

Using Angular clientside routing and everything else you have learned to date, start building out a mutli-route, single page architected website. Include sections that speak to your interests and we will start to shape this later. Some things to start thinking about are angular controllers, Gulp or Grunt for front end automation, API routes and Mongo schemas for any data you might want, maybe some user authentication if you need it. Whatever you think you might need later!

Know that we will present these in class tomorrow morning, so please come ready to show others. There are not a whole lot of requirements or constraints around this. Totally on you to start stubbing out what you would want to include on a site about you.
